Service assurance needs to adapt

Existing tools struggle to keep up in a world of:

<p>Operational complexity</p> <p>Meeting customer expectations is getting harder. Compounding factors:</p> <div style="display: flex; flex-wrap: wrap; justify-content: space-around;"> <div style="background-color: #0056b3; color: white; padding: 5px; margin: 2px;">CNF</div> <div style="background-color: #0056b3; color: white; padding: 5px; margin: 2px;">VNF</div> <div style="background-color: #0056b3; color: white; padding: 5px; margin: 2px;">MEC</div> <div style="background-color: #0056b3; color: white; padding: 5px; margin: 2px;">5G SA</div> <div style="background-color: #0056b3; color: white; padding: 5px; margin: 2px;">5G SLAs</div> <div style="background-color: #0056b3; color: white; padding: 5px; margin: 2px;">IoT / mMTC</div> <div style="background-color: #0056b3; color: white; padding: 5px; margin: 2px;">URLLC</div> <div style="background-color: #0056b3; color: white; padding: 5px; margin: 2px;">Orchestration</div> <div style="background-color: #0056b3; color: white; padding: 5px; margin: 2px;">Traffic growth</div> </div>	<p>Silent suffering</p> <p>Degradations define customer experience much more than outages. 90% go unnoticed².</p> <div style="text-align: center;"> </div>
<p>Diminishing visibility</p> <div style="display: flex; flex-wrap: wrap; justify-content: space-around; align-items: center;"> <div style="background-color: #add8e6; border-radius: 50%; padding: 10px; margin: 5px;">Encryption</div> <div style="background-color: #add8e6; border-radius: 50%; padding: 10px; margin: 5px;">Traffic volume</div> <div style="background-color: #add8e6; border-radius: 50%; padding: 10px; margin: 5px;">Virtualization</div> <div style="background-color: #add8e6; border-radius: 50%; padding: 10px; margin: 5px;">Siloed systems</div> <div style="background-color: #add8e6; border-radius: 50%; padding: 10px; margin: 5px;">Probe scalability</div> </div> <p>80% of traffic will be invisible to traditional service assurance systems by 2024¹.</p>	<p>Big data bills</p> <p>Collecting and analyzing everything is expensive and slow.</p> <div style="text-align: center;"> <div style="display: flex; justify-content: center; gap: 10px;"> Collect ➤ Move ➤ Store ➤ Analyze </div> <div style="display: flex; justify-content: center; gap: 10px; margin-top: 5px;"> \$ \$ \$ \$ </div> <div style="background-color: #0056b3; color: white; padding: 10px; text-align: center; margin-top: 10px;"> Cost of data </div> <div style="margin-top: 20px;"> <p>Some cloud bills for service assurance cost more than the solutions themselves.</p> </div> </div>

125 Gbit/s per 5G probe

100's of probes required to monitor Tier-1 networks

40 petabytes to analyze per hour

Orchestration, automation, CEX and 5G need precise, split-second insight, in context.

Old ways don't work

Assurance is now a network function

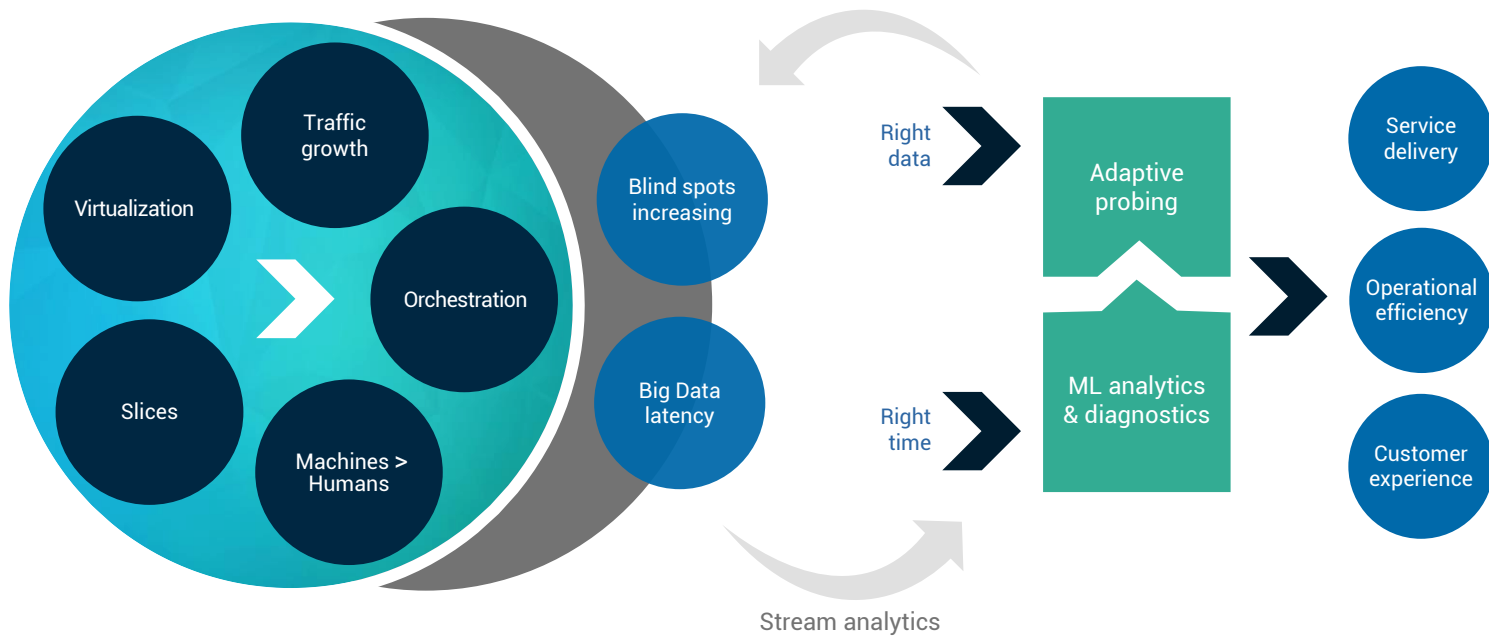

It needs to be scalable, resilient and integrated like the ones it monitors.

A new approach is needed to close the loop

1. EXFO sales engagements with Tier-1 U.S. operators, 2020
 2. Heavy Reading customer survey 2019, EXFO customer data and EXFO advisory board input
 3. Estimates provided are based on 5G network probing requirements provided by leading Tier-1 North American operators

Adaptive service assurance

CSPs need intelligent, adaptive insight to transform

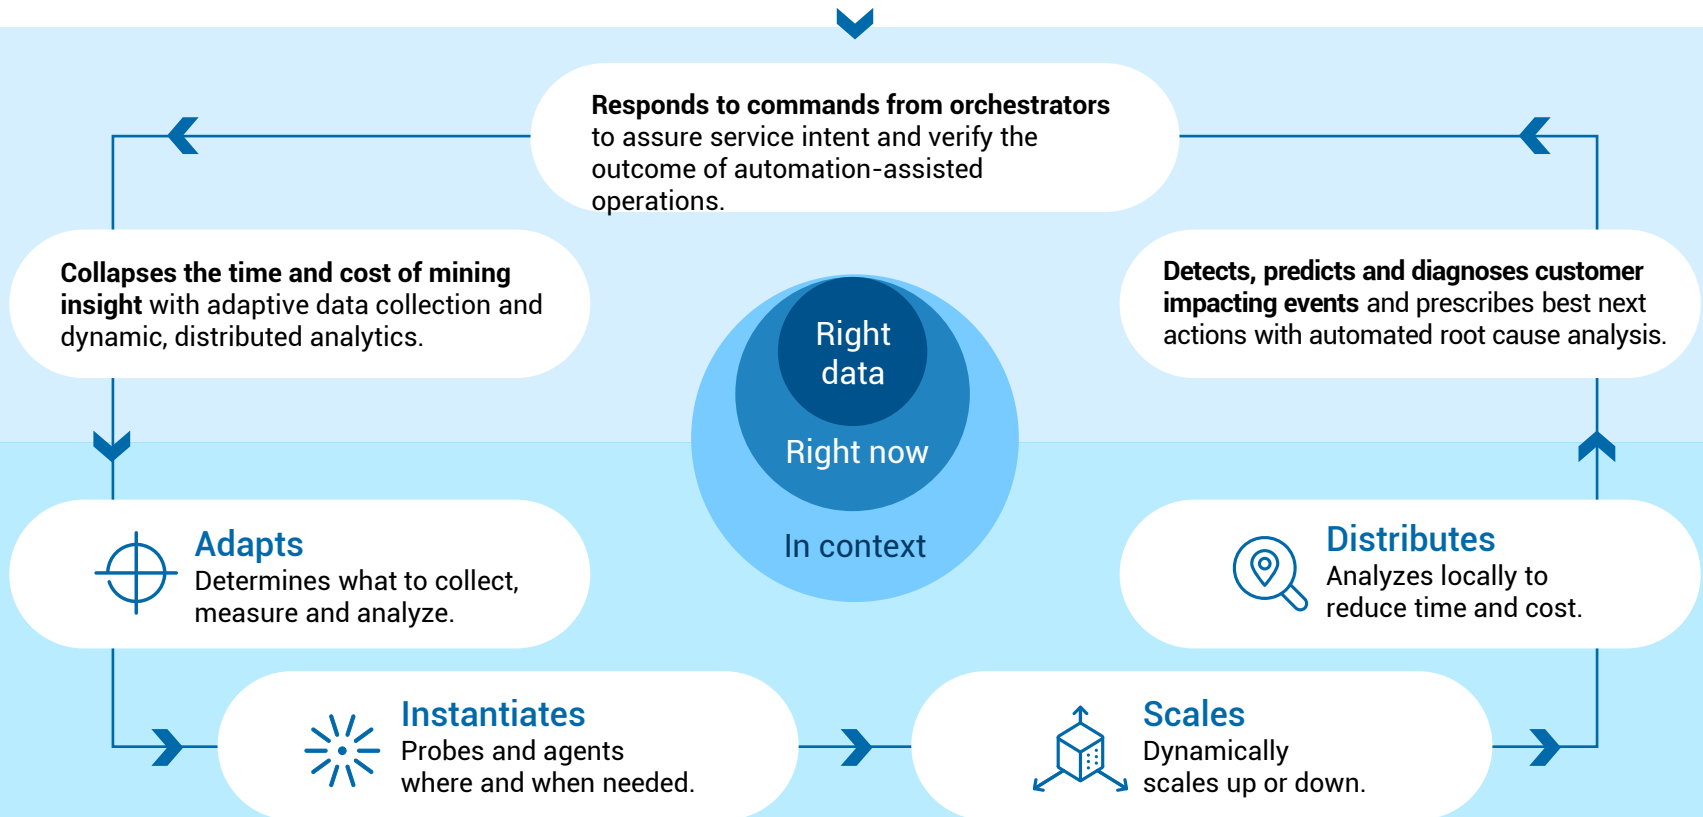

Real-time, in-line

Operators are drowning in big data while losing access to insight at a time when they need to simplify operations and accelerate business outcomes.

Adaptive service assurance

Adaptive service assurance uses AI-driven automation and analytics to shatter big-data overhead and **reveal the small data that matters in the moment** to enable real-time operations and network automation.

Extracts context, insight and value from existing systems by openly ingesting data from service assurance, B/OSS, network functions and more.

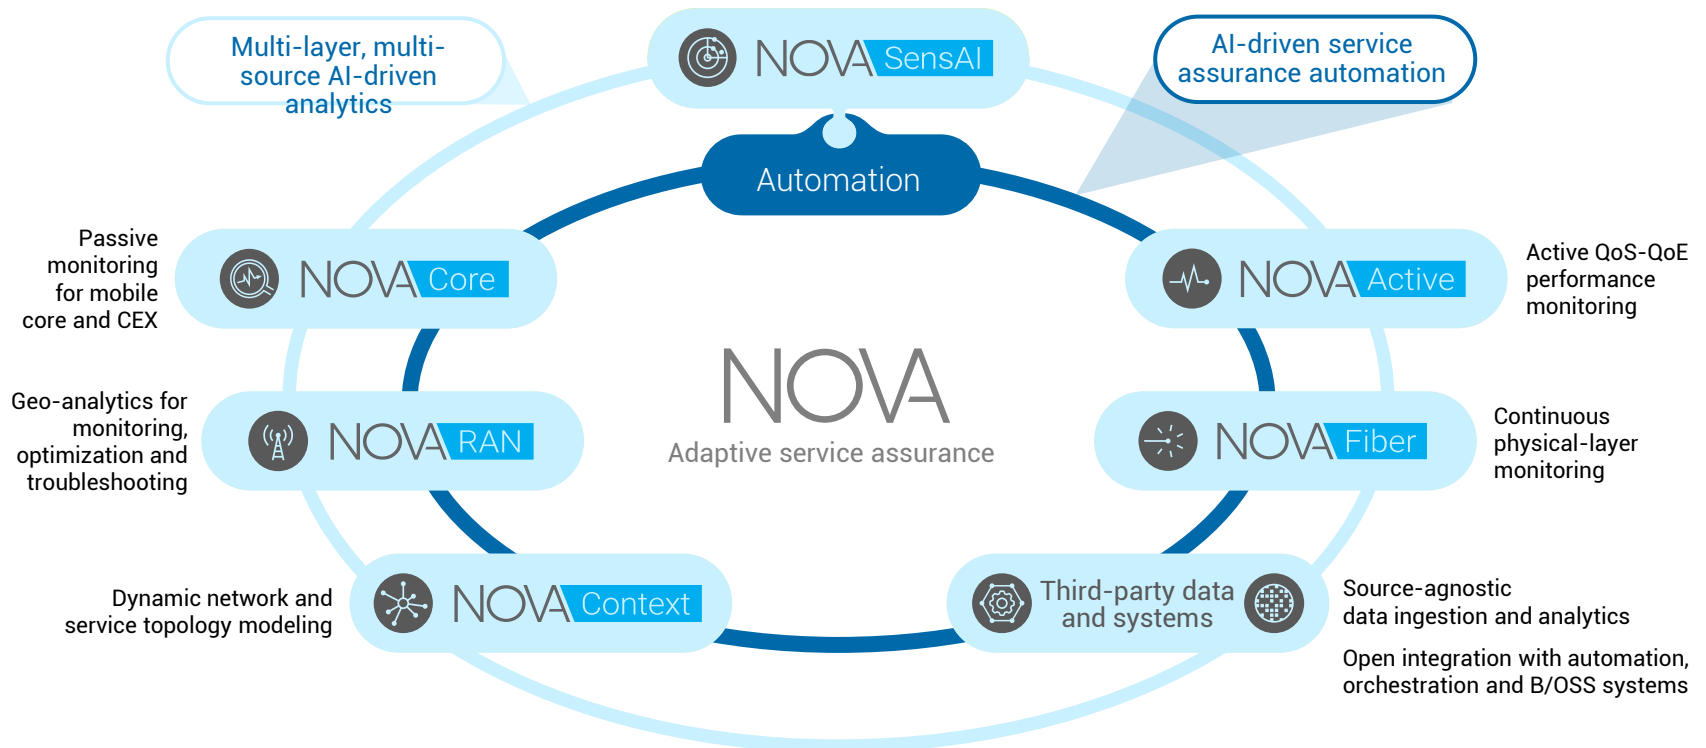

NOVA adaptive service assurance platform

[Learn more](#)

Nova adaptive service assurance uniquely delivers contextual insights that relate service quality and customer experience to infrastructure performance across all layers and domains—fiber, core, cloud, RAN and transport networks.

Nova SensAI's modular analytics and automation platform integrates feeds from one or more monitoring domains. Nova platform components and third-party systems integrate to assure multi-vendor networks, services, applications and infrastructure.

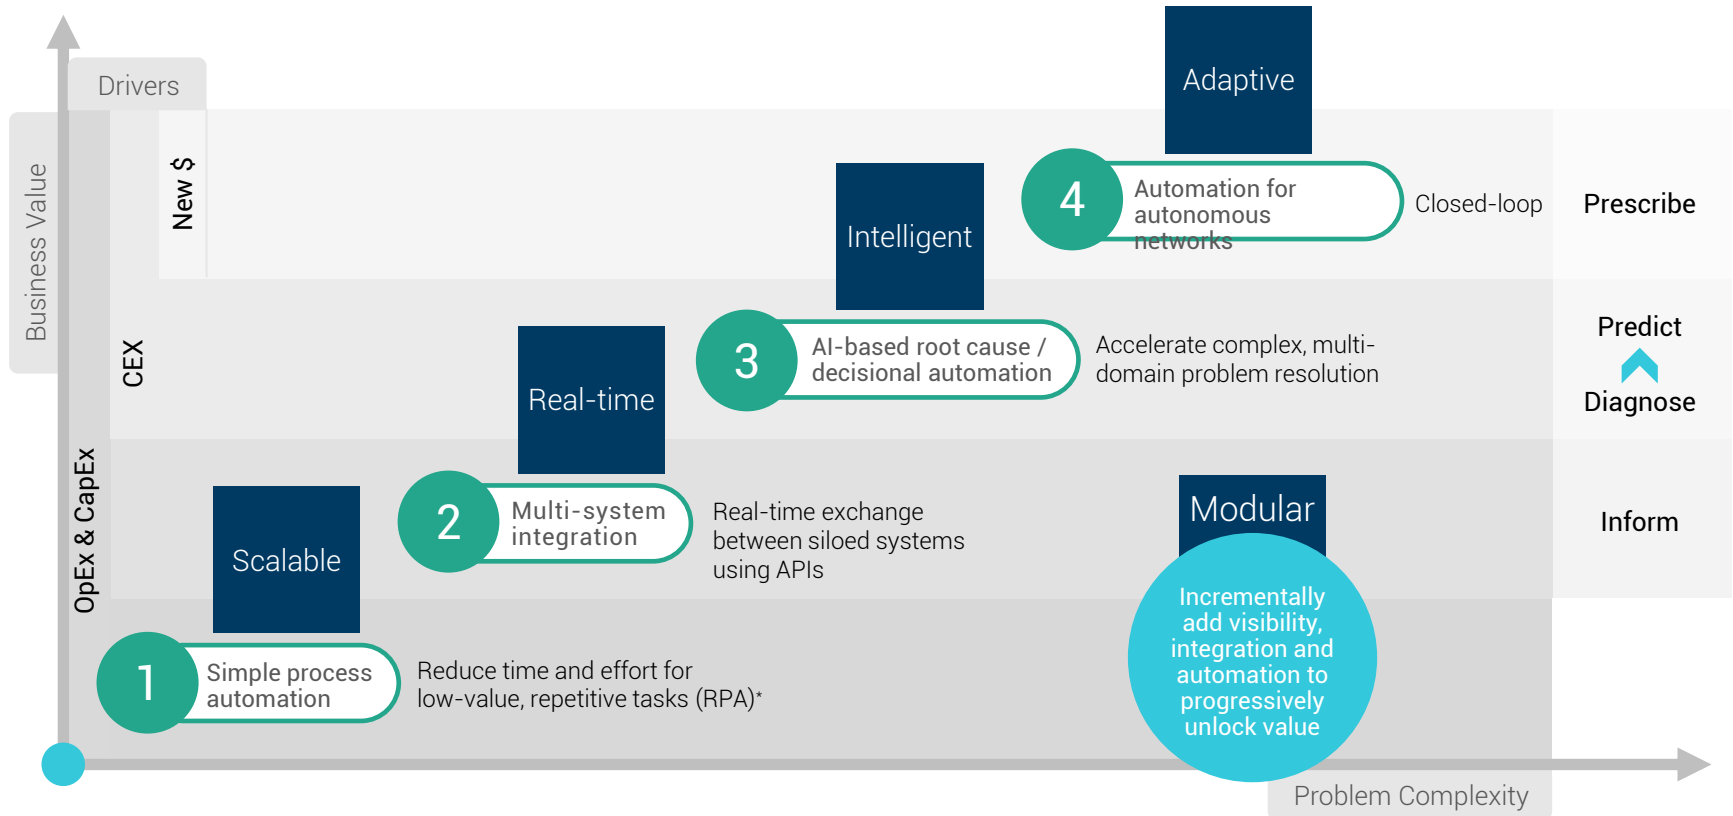

Platform components

NOVA adaptive service assurance

Progressively unlock the value of automation

Automation is a journey. Each step adds incremental value. Delivering a new level of customer experience and generating new revenue requires intelligent automation that learns and adapts to current conditions. AI is required to move from simple scripted automation to predictive insight and autonomous action. Effective automation simplifies and accelerates operations.

RPA = Robotic process automation

NOVA adaptive service assurance for orchestrated, automated networks

Cloud-native networks require close collaboration between man and machine. Because every automation journey is unique, the Nova platform is modular. Add components selectively to build an open, multi-vendor orchestrated network, incrementally.

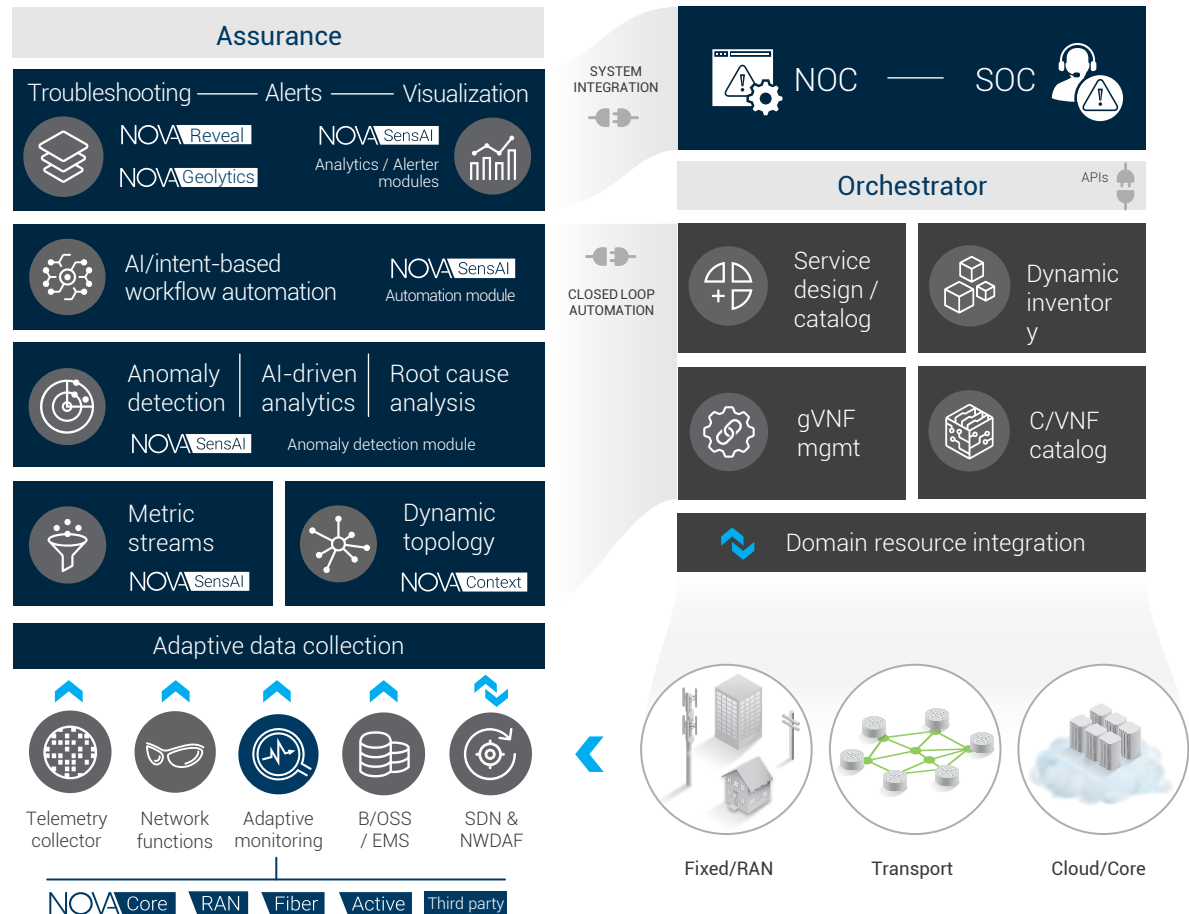

Current, predictive and trend analytics, insight and alerts

Responsive closed-loop feedback automation

AI-driven detection, analysis and diagnostics

Contextual, distributed stream processing

Source-agnostic monitoring and reference data ingestion

NOVA adaptive service assurance

Platform coverage

Cloud-native 3G-4G-5G passive monitoring and troubleshooting from core-to-RAN

Wireless
RAN and core

NOVA **Core**

In-depth visibility into network, services and subscribers across multi-vendor networks. [↗](#)

NOVA **RAN**

RF, device and network geo-analytics across multi-vendor networks, vRAN and ORAN. [↗](#)

NOVA **SensAI**

Automated detection, diagnosis and predictive analytics for customer-impacting events. [↗](#)

5G SA, MEC and
enterprise SLAs

Full stack assurance from core to cloud, edge to customer

Adaptive data collection from existing third-party systems.

Wireline
transport and
services

NOVA **Active**

Integrated QoS and QoE visibility to assure network, voice, video, and application performance. [↗](#)

NOVA **Fiber**

Remote, proactive physical layer testing, monitoring and analytics for transport and access fiber networks. [↗](#)

NOVA **Context**

Dynamic topology maps relationships between infrastructure, services and customers for accurate fault isolation and root cause analysis. [↗](#)

xHaul, slices, MEC • Business services • DCI/Cloud • FTTx/Triple-play • IP transport

NOVA adaptive service assurance

Solution coverage

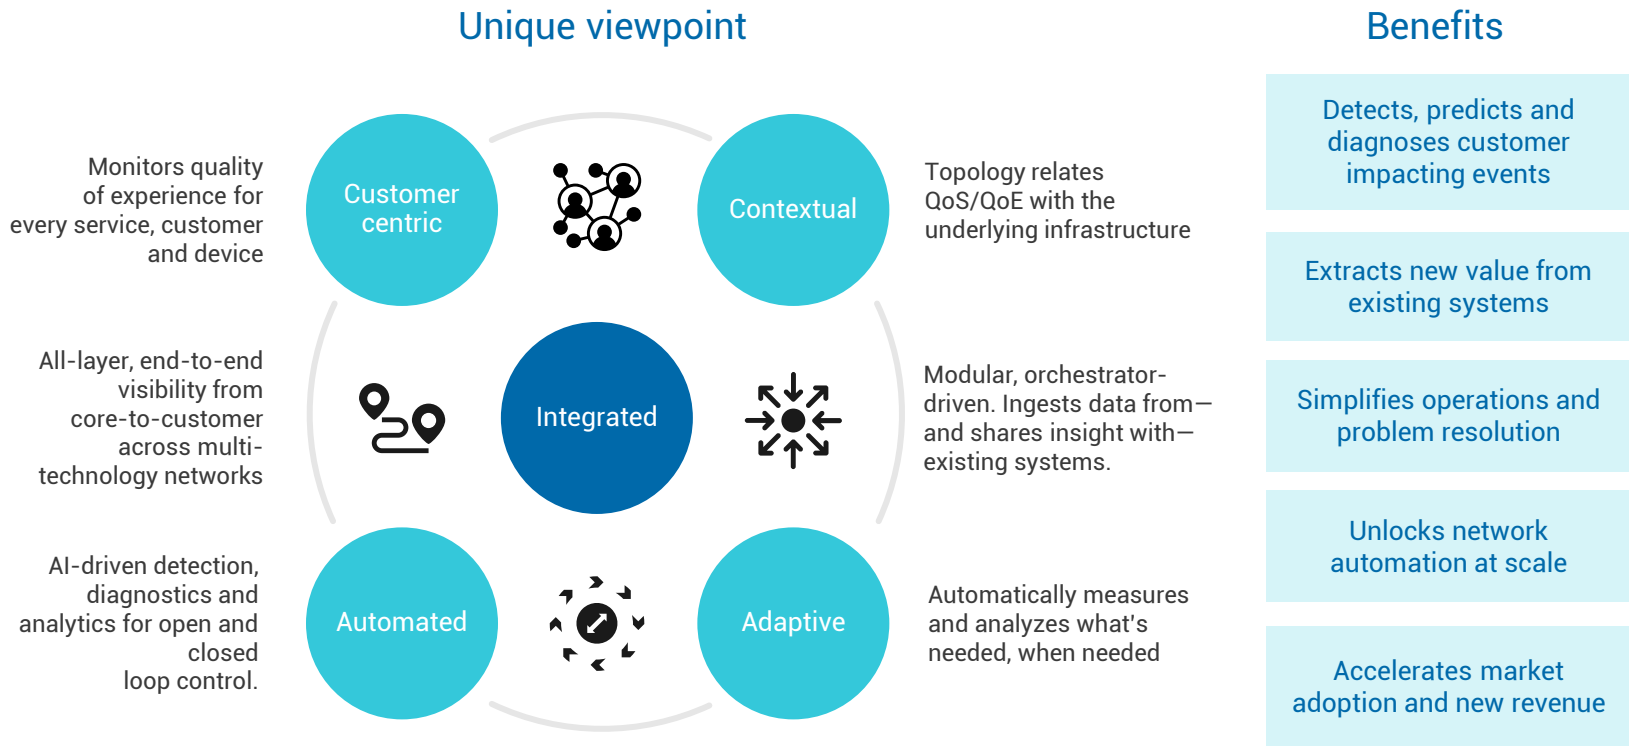

Service providers use the Nova platform to overcome operational challenges, advance automated cloud-native networks, accelerate new revenue and deliver a differentiated customer experience.

Modular solution components integrate with existing systems to provide real-time, prescriptive insight that breaks down siloes to get things done—simply and efficiently.

NOVA platform		Solutions and components*					
							
		SensAI	Core	RAN	Active	Fiber	Context
Network performance	Assure and optimize networks to enhance customer experience with an integrated view of network and service performance.	●			●	●	●
Service quality	Ensure every user and device gets the experience they need with an integrated view of application, network and infrastructure performance.	●	●	●	●		●
5G and mobile	Accelerate the deployment of 5G. Monitor and optimize 3G/4G/5G networks and services from core to RAN to customer.	●	●	●			
Automated assurance	Adaptive, automated insight for orchestrated networks with fast AI-driven problem detection and diagnostics for closed-loop control.	●	●	●	●	●	●
Fiber monitoring	Deploy, optimize, maintain fiber networks for 5G, enterprise and residential services with continuous physical layer monitoring and analytics.	●				●	
OTT QoE	Deliver exceptional quality of experience to differentiate and drive loyalty with network-aware OTT video and application monitoring.	●	●		●		

The Nova platform also assures the adoption of MEC, slices, private networks, and O-RAN.

NOVA adaptive service assurance
