

# Dynamic topology

## Your ally in the race for automation

.....

It's no secret that automation is the future for communications service providers. But how can you **unlock its full value?** How can you ensure that **operations keep the pace** with rapidly changing infrastructures?

.....

EXFO Ontology can help. EXFO's real-time active topology platform gives operators the technology and visibility they need to offer fully assured services in a radically new digital landscape and reap the many benefits of automation:

- Automate processes like fault management, problem detection, troubleshooting, service testing, service assurance and change impact analysis
- Boost business growth, lower OPEX and CAPEX, and decrease customer churn
- Guarantee success when implementing large-scale automation
- Achieve proactive service assurance

To learn more about EXFO Ontology, go to [www.EXFO.com](http://www.EXFO.com).

For more information on why dynamic topology is a powerful ally in today's race for automation and read our blog: [www.exfo.com/en/resources/blog/automation-transforming-digital-economy](http://www.exfo.com/en/resources/blog/automation-transforming-digital-economy)
